### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steve Wigmore on 9/27/05.

2. The application has been amended as follows:

#### **In the Specification:**

3. On page 25, line 7 after "0.5 to about 3000" insert - - or about 0.5 to about 2900 - -.
4. On page 57, line 11 after "g/10 min." insert - - Based on the examples described below, the resins can consist entirely or essentially of thermoplastic polyethylene resins having flow properties corresponding to an MI of about 2.2 to about 105 g/10 min. as measured in accordance with ASTM D 1238; and a viscosity between approximately 230,000 and 4,881,000 cps at about 270°F with a shear rate of about  $10 \text{ sec}^{-1}$  as measured in accordance with ASTM D 3835. - -.

#### **In the Claims:**

5. In claim 1, line 17 delete "3000" and insert therein - - 2900 - -.
6. In claim 23, line 4 delete "an organic polymer" and insert therein - - a stitch bind composition comprising an organic polymer which is present at about 0.2 to about 3 ounces per square yard of the stitched side, the stitch bind composition having a viscosity effective for

coating or penetrating the stitches to contact the filaments thereof ranging from about 0.5 to 2900 cps and comprising an aqueous liquid component - -.

7. In claim 24, line 28 delete "3000" and insert therein - - 2900 - -.
8. In claim 25, line 18 delete "3000" and insert therein - - 2900 - -.
9. In claim 26, line 17 delete "3000" and insert therein - - 2900 - -.
10. In claim 27, line 7 delete "3000" and insert therein - - 2900 - -.

### **REASONS FOR ALLOWANCE**

11. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest a process of manufacturing tufted carpets comprising applying a stitch bind composition to a stitched side of a tufted primary carpet backing wherein the stitch bind composition comprises an organic polymer component and an aqueous component, the stitch bind composition is applied in an amount of about 0.2 to about 3 ounces of the organic polymer component per square yard of the stitched side and the stitch bind composition has a viscosity of 0.5 to 2900 centipoise, followed by applying a thermoplastic binder to the coated stitched side of the tufted primary carpet backing wherein the thermoplastic binder consists entirely or essentially of polyethylene having a melt index of about 2.2 to about 105 g/10 min. (as measured in accordance with ASTM D 1238) and a viscosity between about 230,000 and 4,881,000 centipoise at about 270 °F with a shear rate of about 10 sec<sup>-1</sup> (as measured in accordance with ASTM D 3835).

Smedberg teaches a process of manufacturing tufted carpets comprising applying a stitch bind composition to a stitched side of a tufted primary carpet backing followed by applying a

Art Unit: 1733

thermoplastic binder to the coated stitched side of the tufted primary carpet backing. However, Smedberg does not disclose the thermoplastic binder has a melt index of 2.2 to 105 g/10 min. nor does Smedberg disclose the thermoplastic binder has a viscosity of 230,000 to 4,881,000 centipoise, in fact Smedberg specifically teaches the viscosity is usually 5,000 to 50,000. Bieser et al. teach a process of manufacturing tufted carpets comprising applying a stitch bind composition to a stitched side of a tufted primary carpet backing followed by applying a thermoplastic binder to the coated stitched side of the tufted primary carpet backing. However, Bieser et al. do not disclose the stitch bind composition has a viscosity of 0.5 to 2,900 centipoise nor does Bieser et al. disclose the stitch bind composition is applied in an amount of about 0.2 to about 3 ounces of the organic polymer component per square yard of the stitched side, in fact Bieser et al. specifically teach the stitch bind composition has a viscosity of 3,000 to 50,000 centipoise and the stitch bind composition is applied between 4 and 12 ounces per square yard.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
